- ☒ Antique Brass Finish
- ☐ Nickel Finish
- ☐ Oil Rubbed Bronze

Option:

- ☐ Add Switch

Description

704-GAS Polished Unlacquered Brass Gaslight Replica 2 Arm Sconce

704-GAS-DK Antique Brass Finish Victorian Style 2 Arm Wall Sconce

704-GAS-NP Nickel Plated Recreated 2 Arm Gas Wall Light

704-GAS-OB Oil Rubbed Bronze Finish Recreated Two Light Wall Fixture

The beauty and practicality of electric lights, with the grace and charm of a faithfully recreated gas light. Gas shades are held by a nicely pierced 4" gas fitter. This would be from the later Victorian era, when the 4" wide flame burner was available. Then as now, these put out a good amount of light, up to 200 watts with incandescent bulbs, more with CF bulbs.

Available in five finishes: brass, antiqued brass, pewter, oil rubbed bronze, or nickel plated brass. Beautiful and unexpected for a modern bathroom or hallway, practical for any period home by using our variety of [4" glass shades](#).

Shades are sold separately. Fixture uses 4" fitter shade. We picture [068G](#) as a suggestion.

With our shade fitters, fixture may be hung with the shades up, as it would have been when using gas, or shades down, for better task lighting for a work surface or vanity.

If you'd like an On/Off switch added to the base, we can provide this custom installation for only \$25.00. Please click the "Yes" option in the "Add Switch?" menu to add the switch to your shopping cart.

Pictured here also are a few ideas for complementary fixtures. We show a single gas sconce, [703-GAS](#), great for bedside, hallways, and bathroom. A two-light pendant is gas fixture [712-DGS-EP](#). For a more formal chandelier, see [714-QGS-CH](#).

If your home is 1895 or more recent, you can also use "transitional" fixtures, which mix gas "up" lights and electric "down" lights.

Measurements:

Height: 10 ½"

Width: 10 ¾"

Projects: 10" to edge of [068G](#) shade (as pictured).

Wattage: 100 watts per socket, yielding 200 watts total.
